

Quality Analysis (QA) Maturity Level Up

description_

Running in a live environment can be challenging. In an environment where everything is urgent, maintaining quality is only possible with well-described quality gates.

Although development teams are aware of the value of high-quality products, sometimes they may have to take risks because of priorities, deadlines, or commercial concerns. Let them concentrate on their primary responsibilities while we establish a comprehensive setup for QA. With our modern quality management approach, we bring full visibility into the big picture.

While our expert QA consultants working closely with development teams put customized quality gates in place, they also enable QA expertise within the team itself. This way, sustainable workflows are built with product-centric quality management. When QA teams reach a certain level of maturity, they become co-decision-makers of the product.

The QA Maturity Level Up consultancy involves several aspects, including the definition of test activities in the

development and release cycles, improvements in workflows, advice on the tools, and quality checklists for each stage. The service is based on the principle of creating sustainable know-how through our detailed documentation. A well-structured setup gives our customers the opportunity to make unseen product risks visible.

Service Metrics

Effort : 10-20 Person/Day

Duration : 4-6 Weeks

Team structure : 1-2 Consultants

Tooling

Miro

Jira

Confluence

Mentimeter

motivations_

- ▶ “First delivery, then quality” approach
- ▶ Lack of confidence in go/no-go decisions
- ▶ Lack of efficient traceability among defects, tests, and requirements
- ▶ Lack of tools and process knowledge
- ▶ Lack of incident management
- ▶ Complex system dependencies

recommended adesso services_

- ▶ Agile Transformation
- ▶ Agile Trainings
- ▶ UX Design 101

references_

- ▶ Cuju (Rogon)
- ▶ PepsiCo
- ▶ adconnect

prerequisites_

- ▶ QA Health Check Initial Assessment
- ▶ Granted access to ALM (Application Lifecycle Management) and test management tools

deliverables_

- ▶ An established and traceable quality process
- ▶ Determined QA methods and metrics
- ▶ Documentation of strategy, plan, templates, workflows, and standards
- ▶ Determined quality gates (QGs)
- ▶ Key users trained on testing tools and relevant test phases
- ▶ End-to-end traceability
