

Implementation of Privacy Information Management According to ISO 27701

description

Are you overwhelmed by managing personal information while trying to comply with the ever-changing privacy regulations? Implementation of a privacy information management system and how organizations should best protect the privacy of personal information have never been more pertinent. Fortunately, guidance exists in the form of ISO/IEC 27701 consultancy, which sets out how organizations should manage personal information and demonstrate compliance with local and global privacy regulations.

Companies may benefit from ISO 27701 as they create, implement, maintain, and upgrade their Privacy Information Management Systems (PIMS), which also provide financial stability by reducing the risk of being fined for non-compliance.

Not only can ISO 27701 provide assurance to senior management and the board, but the standard can also help you build trust with other stakeholders (such as customers, partners, and shareholders) by providing tangible evidence of your organization's commitment to protecting PII.

ISO 27701 is written in such a way that it can be used by organizations of all sizes and from all business sectors. It is also structured in such a way that it clearly differentiates the guidance for companies to manage private data in a transparent and compliant way, be accountable for the personal data they process, and adhere to privacy principles.

Otherwise, they risk significant regulatory fines, the loss of customers' trust, and data breaches. If you need to demonstrate that you comply with several data protection regimes, you will find that ISO 27701 better suits your purposes.

The adesso team is ready to help you with certified experts in CISA, CISM, CRISC, CDPSA, and ISO 27001 LA.

Service Metrics

Effort : 20-30 Person/Day

Duration : 2-4 Weeks

Team structure : 2 Security Consultants | 1 Legal Expert (optional)

Standards & Frameworks

- ISO/IEC 27701
